

1 Institution and responsible: Fundació ENT. Miquel Ortega

2 Title: Oil prices impacts in Spanish Mediterranean fisheries economic sustainability. Implications in terms of climate change and consumption policies

3 Aim: What would be the economic and ecological consequences of an increase of oil prices in the Spanish Mediterranean Fisheries fleet? What may be the expected results for trawlers, purse seiners, artisanal fleet and the complete sector? What would be the impacts in terms of the needed ecological transition specially in terms of climate change and consumption?

4 Outcome: As a final outcome of the project a report would be published by Fundació ENT. An English and Spanish version is expected. In order to complete the research quantitative data from the "encuesta económica Pesquera" would be used, as well as qualitative research.
