**Contact**

Name: Maria Fátima Bosch Tubert
Email: Fatima.Bosch@uab.cat

**Teachers**

Ana Carretero Romay
Marc Navarro Beltrán
Jesús Ruberte Paris
Miguel Chillon Rodriguez
Pedro José Otaegui Goya
Víctor Nacher García
Assumpció Bosch Merino
Anna Maria Pujol Altarriba
Virginia Areba Haurigot Mendoça

**Prerequisites**

Graduate in the field of life sciences, for example:
Biology, Biochemistry, Biomedicine, Biotechnology, Pharmacy, Genetics, Medicine, Veterinary Medicine.

**Objectives and Contextualisation**

The student will gain insight into:

- Technologies used to generate transgenic animals overexpressing specific transgenes or mutant models with specific endogenous genes modified (knockout and knockin animal models).
- Application of the aforementioned technologies in biomedicine, biotechnology and livestock.
- Mouse anatomy and embryology in order to understand the embryonic development of organs and to analyze morphological/anatomical abnormalities in genetically modified mouse models.
- In vivo and ex vivo gene therapy, including characteristics of the different types of vectors (viral and non-viral) used for gene transfer as well as their advantages and disadvantages, administration routes and applications of gene therapy in the treatment of hereditary and non-hereditary human diseases.

**Skills**

Principal working language: english (eng)
Advanced Biotechnology

- Apply techniques for modifying living beings or parts of these in order to improve pharmaceutical and biotechnological processes and products or develop new products. (Specialisation in molecular and therapeutic biotechnology)
- Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- Use advanced biotechnology tools in combination to solve problems in emerging areas of biotechnology.
- Use and manage bibliography and IT resources related to biotechnology responsibly.

Biochemistry, Molecular Biology and Biomedicine

- Analyse and explain normal morphology and physiological processes and their alterations at the molecular level using the scientific method.
- Analyse research results to obtain new biotechnological or biomedical products to be transferred to society.
- Apply techniques for modifying living beings or parts of these in order to improve pharmaceutical and biotechnological processes and products or develop new products.
- Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
- Conceive, design, develop and synthesise scientific and/or biotechnological projects within biochemistry, molecular biology or biomedicine.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- Use and manage bibliography and IT resources related to biochemistry, molecular biology or biomedicine.
- Use scientific terminology to account for research results and present these orally and in writing.

Learning outcomes

1. Analyse research results to obtain new biotechnological or biomedical products to be transferred to society.
2. Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
3. Describe the foundations of in vivo and ex vivo gene therapy.
4. Describe els fonaments de la teràpia gènica in vivo i ex vivo.
5. Distingir les diferents metodologies usades per a obtenir animals transgènics que permeten la sobreexpressió, el bloqueig o la modificació de gens endògens de manera ubiqua o específica de teixit i/o induïble.
6. Explain the characteristics of the different types of vectors used in gene transfer, their advantages and disadvantages, and their use for each disease or tissue.
7. Explicar les característiques dels diferents tipus de vectors usats per a la transferència gènica, els seus avantatges i inconvenients, així com la seva utilitat per a cada malaltia o teixit.
8. Interpret molecular or physiological alterations of a transgenic animal.
9. Interpret the results of gene therapy clinical trials in humans.
10. Propose un protocol d'utilització de teràpia gènica.
11. Propose a protocol for the use of gene therapy.
12. Show knowledge of the different methodologies used to obtain transgenic animals that allow the global or tissue-specific and/or inducible over-expression, blockage or modification of endogenous genes.
13. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
14. Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
15. Use and manage bibliography and IT resources related to biochemistry, molecular biology or biomedicine.
16. Use and manage bibliography and IT resources related to biotechnology responsibly.
17. Use scientific terminology to account for research results and present these orally and in writing.
18. Visualise morphological changes in a transgenic animal.

Content

PART 1. MOUSE MORPHOLOGICAL PHENOTYPING

1. Anatomic Terminology and Regions
2. Development and Placenta
3. Osteology
4. Arthrology and Miology
5. Cardiovascular System
6. Respiratory Apparatus
7. Digestive Apparatus
8. Urinary Organs
9. Male and Female Genital Organs
10. Nervous System
11. Visual Organ
12. Vestibulocochlear Organ

PART 2: TRANSGENIC ANIMALS AND GENE THERAPY

By F. Bosch, A. Pujol, P. Otaegui, E. Riu, F. Mingozi, S. Frankhauser, V. Haurigot and M. Garcia,
Dept. Biochemistry & Molecular Biology, UAB

Part 2.1. Transgenic Animals:
1. Generation of transgenic animals by pronuclear microinjection.
2. Constitutive and conditional (tissue specific and/or inducible) Knockout/in animals.
3. Cloned animals by nuclear transfer. Aplications.
6. Aplications of transgenic animal technology in the study of diabetes, obesity, inherited diseases…
7. Analysis of the mechanisms involved in epigenetic silencing / activation of transgenes in vivo.

Part 2.2. Gene Therapy:
1. Introduction to the gene therapy field.

7. Invivo* genome editing with Zinc-finger nucleases.

**PART 3. INTRODUCTION AND DESIGN OF GENE THERAPY CLINICAL TRIALS FOR THE TREATMENT OF HUMAN DISEASES**

By M. Chillon and A. Bosch, Dept. Biochemistry & Molecular Biology, UAB

Invited speaker: Manel Cascalló, VCN

1-Introduction to clinical trials. Factors to consider in the design of clinical trials of gene therapy. MChillon

2-Development and production of vectors for clinical trials. MChillon

3-Regulation on the use of Genetically Modified Organisms. Biosafety level and quality of production (GMP and GLP conditions). MChillon

4-Clinical trials using non viral vectors. MChillon

5-Strategies to improve biosecurity and to reduce the immune response in clinical trials using adenoviral vectors. MChillon

6-Adenoassociats vectors in clinical trials. Increased tissue specificity using pseudotyped AAV vectors. Immune response. ABosch

7-Vectors derived from herpes virus in clinical trials. ABosch

8-Advantages and disadvantages of retroviral and lentiviral vectors in clinical trials. ABosch

9-Ongoing clinical trials for specific diseases: Haemophilia, β-Thalassemia, Primary Immunodeficiencies, Cystic Fibrosis, Duchenne Muscular Dystrophy, lysosomal storage diseases, neurodegenerative diseases, blindness, cancer, etc. ABosch, MChillon

**Methodology**

Combination of lectures and laboratory practices and presentation of a project supervised by the teacher.

Theory 72%
Laboratory 11%
Supervised work 14%
Tutoring 3%

**Activities**

4
Type: Directed

Lectures and lab practices 55 2.2 1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18

Type: Supervised

Preparation of oral presentations and lab practices 44 1.76 1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18

Type: Autonomous

Literature search and study for exams 120 4.8 1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18

Evaluation

The evaluation of the module will be based on work done by students, attendance and class participation, practices, oral defence of a scientific paper and the grade of an exam at the end of the course.

A student will get the qualification of "Not Evaluable" when the number of the evaluation activities done is lower than 50% of the programmed ones for the subject.

Important: If plagiarism is detected in any of the works submitted, the student will fail the whole module.
