

AllRead

AllRead is a Spanish based startup in the smart logistics ecosystem, dedicated to tracking and monitoring assets in operational processes.

Its deep learning based OCR software, has been validated with various use cases in the freight industry: identification of containers, dangerous goods symbols, vehicle licence plates, wagon codes among others, reaching an accuracy above industry standards, even in the most challenging operational environments, such as dust, dirt, movement and blur.

● Technologies

AllRead provides a disruptive reading solution for tracking and monitoring identification codes and signs in freight assets. Based on a unique Deep Neural Network architecture for computer vision, AllRead's innovative technology liberates from the hardware dependency. Relying on its robust reading performance, it is able to automatically spot the relevant codes in images acquired in unconstrained conditions.
