(*) These subjects are common to all the Faculty's degrees

GEP- Primary Education - Study guides

GEI- Early Childhood Education - Study guides

Transnatura Project

It consists of a two days trip and a night out in nature (so it's an overnight stay) aimed at providing an intense and formative experience in the natural environment which, besides working specific objectives of each of the disciplines, it also facilitates the approach of transversal aspects such as sustainability, healthy living, coexistence and the relationship between school and nature, among others. The date of departure will be confirmed at the beginning of the course (last year in October). Details regarding timetables, price, itinerary and luggage will be provided at least 10 days before the departure. Attendance is mandatory. In case someone is unable to attend it, he/she will have to prove the reason for missing it and perform a compensatory work previously agreed with the teaching team. The activities carried out during the trip will be part of the continuous evaluation of the different subjects. At the beginning of the course each teacher will specify the learning evidences and the corresponding evaluation criteria. Subjects involved: Didactics of Experimental Sciences, Learning and Development II, Visual Music Education and learning, Physical Education and its Didactics I.
