

Degree	Type	Year	Semester
4313861 High Energy Physics, Astrophysics and Cosmology	OT	0	2

## Contact

Name: Francisco Javier Castander Serentill

Email: Desconegut

## External teachers

Jorge Carretero

Linda Blot

## Use of languages

Principal working language: english (eng)

## Prerequisites

None.

## Objectives and Contextualisation

The course is intended to acquaint students with the basic concepts about galaxies and extragalactic astronomy research in general.

We want to present the students how we have been learning about the galaxy properties throughout the years to reach our current understanding of galaxy formation and evolution and what the current lines of research are nowadays.

## Skills

- Formulate and tackle problems, both open and more defined, identifying the most relevant principles and using approaches where necessary to reach a solution, which should be presented with an explanation of the suppositions and approaches.
- Understand the bases of advanced topics selected at the frontier of high energy physics, astrophysics and cosmology and apply them consistently.

## Learning outcomes

1. Distinguish between the different types of active galaxy.
2. Tackle the problem of the evolution of galaxies in its totality.
3. Understand the fundamentals and evolution of the Milky Way.

## Content

- Historical introduction
- Galaxy Classification
- Galaxy Dynamics

- Global Properties of Galaxies
- The Milky Way
- The Local Group
- Stellar Population Synthesis Models
- Photometric Redshifts
- Gravitational Lenses
- Clusters of Galaxies
- Active Galaxies and Quasars
- High Redshift Galaxies
- Galaxy Models

## Methodology

Lectures and exercises.

Classwork and homework.

## Activities

Title	Hours	ECTS	Learning outcomes
<b>Type: Directed</b>			
Lectures	68	2.72	
<b>Type: Autonomous</b>			
Exercises, presentations, discussion, literature work	68	2.72	
Study of lectures material	68	2.72	

## Evaluation

Exam, homework, oral presentation and summary of seminar material.

## Evaluation activities

Title	Weighting	Hours	ECTS	Learning outcomes
Exam	50%	2	0.08	1, 2, 3
Homework exercises	20%	9	0.36	1, 2, 3
Oral presentation	20%	7	0.28	1, 2, 3
Summary of seminar material	10%	3	0.12	1, 2, 3
