Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Teachers

Rocio Pina Rios

Prerequisites

There are no prerequisites but it is convenient to have some knowledge of reading in English and to have passed the subject "Introduction to the scientific methodology and basic psychological processes" from the first year.

Objectives and Contextualisation

By studying the different psychological processes in the first year you have seen the importance of memory in the construction of the identity of the person and its relationship with the other psychological processes. In this subject we will deepen into the structures, functions and processes of human memory and especially in its relation to language.

Thus, our aim is that at the end of the course the student will be able to:

1. Understand the role of memory in human behaviour, its importance, the basic mechanisms of its functioning and the factors that can affect memory.
2. Recognize the different structures, systems and processes involved in memory.
3. Understand the main relationships of memory with some linguistic skills: acquisition of vocabulary, reading and comprehension, learning foreign languages.
4. Identify the implications of memory mechanisms in some areas of daily life such as education, publicity, and the memory of witnesses.
5. Know some practical applications that improve mnemonic processes: mnemonic rules and factors that improve the processes of coding, storage and retrieval of information.

Competences

- Analyse and synthesise information.
• Demonstrate an understanding and correct use of the terminology and methodology of speech-therapy research.
• Evaluate the scientific production that supports speech therapists professional development.
• Express oneself fluently, coherently and suitably following established norms, both orally and in writing.
• Integrate the foundations of biology (anatomy and physiology), psychology (evolutionary processes and development), language and teaching as these relate to speech-therapy intervention in communication, language, speech, hearing, voice and non-verbal oral functions.
• Organise and plan with the aim of establishing a plan for development within a set period.
• Understand, integrate and relate new knowledge deriving from autonomous learning.
• Use the exploratory techniques and instruments pertaining to the profession, and register, synthesise and interpret the data provided by integrating this into an overall information set.

Learning Outcomes

1. Analyse and synthesise.
2. Consider designs that are suitable for practice on different processes and phenomena involved in memory and thinking.
3. Correctly use the terminology and methodology of research into higher cognitive functions in the field of speech therapy.
4. Critically interpret the results of evaluations conducted, relating these to disorders of thought and memory and their effect on language.
5. Critically interpret the results of research into the processes involved in thought and memory.
6. Describe and apply different strategies for enhancing cognitive functions.
7. Describe the main processes and systems involved in memory and thinking.
8. Describe the main techniques and assessment tools of thought and memory.
9. Explain the effects of certain diseases or brain traumas on memory and thought processes.
10. Express oneself fluently, coherently and suitably following established norms, both orally and in writing.
11. Organise and plan with the aim of establishing a plan for development within a set period.
12. Prepare and write reports based on the results of experiments into thinking and memory.
13. Relate the processes of memory with language.
14. Understand, integrate and relate new knowledge deriving from autonomous learning.

Content

1. MEMORY: DEFINITORY ASPECTS. Memory within cognitive processes. Psychological and sociocultural variables that affect the mnemonic process. The measure of memory.

3. MEMORY SYSTEMS. The sensory memory. Short-term memory or working memory. Long-term memory (episodic memory versus semantic memory, procedural memory versus declarative memory, implicit memory versus explicit memory).

6. MEMORY AND VOCABULARY ACQUISITION. Role of memory in the acquisition of vocabulary in the mother tongue and in foreign languages.
7. MEMORY AND READING. Role of memory in learning to read.

8. MEMORY AND COMPREHENSION. Importance of memory in the comprehension of texts.

Methodology

DIRECTED ACTIVITIES
Theoretical classes, practices and seminars:
  a) Lectures with ICT support and debate in a large group
  b) Practical classes of discussion of basic concepts through small exercises.
  c) Seminars to discuss cases or articles in a small group
SUPERVISED ACTIVITIES
  Tutorials:
    Follow-up tutorials with the teacher in a small group
  Writing and elaboration of works:
    Tutorial of works (individual or group) in person or virtual
AUTONOMOUS ACTIVITIES
  Search, reading and synthesis of documentation:
    Definition of the search strategy in databases, comprehensive reading and preparation of synopsis of the read material.
  Report writing and public presentation of works:
    Practice reports, individual or group.
  Study:
    Elaboration of schemes, conceptual maps and summaries.

Assessment
The competences of this subject will be evaluated through different procedures. For each of the evidences, its weight on the total is indicated:
  a) Two multiple-choice exams: 70% (35% + 35%)
  b) Report and discussion of practices: 20% (15% + 5%)
  c) Discussions of the readings: 10% (5% + 5%)
d) Optional work: To raise the grade (maximum 10%).
Minimum compliance will be established from which the student will be able to pass the subject: a minimum grade of 5 in the final weighted score. None of the evidences of evaluation is mandatory as long as the final grade obtained from the evidences a) b) and c) (ie not counting the optional work) is equal to or greater than 5. The student who has given evidence of learning with a weight below 4 points (40%) will be considered as "not evaluable".
A final reevaluation will be made for students who have failed (final grade below 5) as long as they have made evidence with a weight equal to or greater than 2/3 of the total score. For these students the most adequate reevaluation activities will be carried out in each case to improve the aspects where a satisfactory performance during the course would not have been demonstrated. The qualification of the optional work will only be added to the final grade (maximum 10% added) as long as this final grade is at least 5 and the optional work is approved. The student of second degree enrollment (or more) may be evaluated in a single final synthesis test as long as he has not obtained a grade equal to or greater than 5 in the evidence of continuous assessment learning. This test will consist of 40 multiple-choice questions about all the contents of the subject. The student who is in these conditions and wants to be evaluated through the final synthesis test must inform the coordinator before the exam date of the first part (EV3).
